

Work In Progress Tracking

Market

- ◆ Manufacturing Units

Products Used

- ◆ Barcode Scanners
- ◆ Batch / Wireless Scanners
- ◆ Back-end Software

Bartronics has developed and implemented Work in Progress Tracking Solution to effectively Control and manage the flow of work thereby tracking the production..

Once the material is received in the raw material stores, it has to be issued to shop floor. Keeping the track of material consumed in WIP could be a difficult task. However, with the help of bar coding, the same could be achieved very easily. The bar code of the raw material being issued to production is scanned against the bar codes production/work order. When all the operations, work centers and control points are bar coded, by just simple scanning the bar coded production label, you could achieve real-time material consumption and WIP status very easily.

Advantages

- ◆ Tracking of the material consumed at each stage can be done.
